Modes of Courses

1. Offline Mode

In the offline mode, learners attend classes physically at the institute's premises. This mode allows for direct interaction with trainers, access to on-site infrastructure (labs, classrooms, study materials), and the opportunity to participate in classroom discussions, group work, and one-on-one support. It is ideal for learners who prefer a traditional classroom setting with face-to-face learning.

2. Online Mode

The online mode offers remote learning through live virtual sessions conducted via video conferencing platforms. Learners can attend classes from any location, access digital resources, and interact with trainers and peers online. This mode is suited for those who need flexibility in location and time while still participating in structured, real-time classes.

3. Weekend Mode

Weekend mode is designed specifically for working professionals or students who are occupied during weekdays. Classes are conducted on Saturdays and Sundays, typically in longer sessions to cover the weekly curriculum. This allows learners to manage their work or academic commitments while pursuing upskilling programs on weekends.

4. Hybrid Mode

The hybrid mode combines both offline and online learning. Learners attend some sessions in person at the institute while participating in other sessions virtually. This mode provides flexibility and convenience while maintaining opportunities for in-person interaction and access to physical resources. It's ideal for learners who want the benefits of both modes.

Each mode caters to different learner needs and schedules, allowing for greater accessibility and personalized learning experiences.
